 - 12. Summary
-

1. Purpose and Scope

Because all NovaTech Solutions products are delivered as cloud-based software rather than physical goods, this policy addresses **refunds** rather than product returns in the traditional sense. There is no physical item to send back; instead, this policy defines when a customer is entitled to a refund of fees paid, how that refund is calculated and processed, and how product/edition access is adjusted (deprovisioned) once a refund is issued. This policy applies across all subscription editions and add-ons and works in conjunction with the billing terms defined in the Pricing and Subscription Guide (Document 2).

2. Refund-Eligible Purchases

The following purchase scenarios are eligible for a refund, subject to the conditions noted:

Purchase Type	Refund Eligibility
First-time subscription purchase (any product/edition)	Full refund if canceled within 14 days of initial purchase
Duplicate or erroneous charge	Full refund of the erroneous amount, regardless of timing
Confirmed billing system error (e.g., incorrect proration)	Full refund of the overcharged amount
Documented, confirmed SLA failure (uptime below commitment)	Service credit per the Warranty and Service Policy, not a cash refund, unless otherwise negotiated
One-time add-on purchased in error and unused (e.g., Premium Onboarding Package not yet scheduled)	Full refund if request is made before service delivery begins
Enterprise multi-year contract terminated early	Governed by the applicable Master Services Agreement; see Section 9

3. Non-Refundable Charges

The following are generally **not** eligible for refund:

- Renewal charges on an existing subscription (a renewal is treated as an accepted continuation, not a new first-time purchase).
- Annual subscription fees for the unused portion of the term, when canceled after the initial 14-day window.
- One-time Premium Onboarding Packages or professional services once work has commenced.
- Add-on purchases (additional storage, API rate limit tiers) once activated and used within a billing cycle.
- Marketplace application fees charged directly by a third-party developer rather than by NovaTech Solutions.
- Fees associated with usage that has already occurred (for example, API requests already processed under a purchased rate limit tier).

Note: "Unused" in the context of the 14-day first-time refund window refers to the subscription overall, not the absence of any activity. A customer who actively used the product during the 14-day period remains eligible for a refund under the standard first-

time purchase policy; usage during the evaluation window does not itself disqualify a refund request.

4. Refund Timeline and Processing

Once a refund is approved:

1. Billing Support confirms the refund amount and the original payment method on file.
2. The refund is issued to the original payment method used for the purchase; NovaTech does not issue refunds to a different card or account.
3. Credit card refunds typically post within 5–10 business days, depending on the card issuer's own processing time.
4. ACH and SEPA direct debit refunds typically take 7–12 business days.
5. Wire transfer refunds, used only for qualifying Enterprise accounts, typically take up to 15 business days due to international banking processing.
6. The customer receives an email confirmation once the refund has been issued on NovaTech's side, along with a reference number for tracking with their bank if needed.

Tip: If a refund does not appear within the stated processing window, customers should first check with their card issuer or bank, as the delay is most often on the receiving institution's side once NovaTech has issued the refund.

5. The "Return" Process for Digital Products

Since there is no physical product to return, the equivalent process for a refunded subscription is **deprovisioning** — the removal of access associated with the refunded purchase.

Standard deprovisioning sequence following an approved refund:

1. The refunded product or edition is scheduled for deprovisioning, generally effective immediately for full-subscription refunds.
2. The account administrator receives advance notice of the access change before it takes effect, except in cases of confirmed fraud or Terms of Service violation.
3. Data associated with the refunded product is retained in a read-only, exportable state for 30 days following deprovisioning, consistent with the standard cancellation data retention policy described in the Pricing and Subscription Guide, Section 12.
4. If the refund applies to only one product within a multi-product account (rather than the full account), only that product is deprovisioned; other purchased products remain fully active and unaffected.

Warning: Requesting a refund for a product that other purchased automations, integrations, or cross-product links depend on (for example, refunding NovaTech CRM

while automations in NovaTech Projects reference CRM data) may cause those dependent configurations to stop functioning. Customers should review cross-product dependencies before requesting a refund of a single product from a multi-product account.

6. Edition and Product Exchanges

NovaTech does not process "exchanges" in the traditional sense, since edition and product changes are handled directly through the upgrade and downgrade mechanisms described in the Pricing and Subscription Guide (Document 2), Sections 10 and 11, rather than as a refund-and-repurchase transaction.

- A customer wishing to move from one edition to another (for example, from CRM Professional to CRM Enterprise) should use the standard Upgrade Policy rather than requesting a refund and new purchase; this preserves data, configuration, and billing history without interruption.
 - A customer wishing to switch from one product to a different product entirely (for example, canceling Helpdesk and instead purchasing Insights) may do so as two separate transactions: a standard cancellation of the unwanted product (see Section 12 of the Pricing and Subscription Guide) and a new purchase of the desired product. The 14-day refund window applies independently to each transaction.
-

7. Digital Product-Specific Rules

Certain rules apply specifically because NovaTech's products are software rather than physical goods:

- There is no cost associated with return shipping, since no physical item is involved.
 - Refund eligibility is not affected by the extent of feature usage during the eligible window, as noted in Section 3.
 - Because subscription access is typically provisioned within minutes of purchase (see the Order Provisioning and Delivery Policy, Document 7), there is no "unopened product" concept; the 14-day window begins at the time of purchase confirmation, not at first login.
 - Downloadable components (such as the NovaTech Connect desktop application or mobile apps) are provided at no separate charge and are not independently refundable; they are simply access clients for the underlying subscription.
 - Data exported from the platform prior to a refund remains the customer's property and is unaffected by the refund; NovaTech does not request or require deletion of previously exported data as a condition of a refund.
-

8. Subscription Refund Scenarios

The following scenarios illustrate how refund eligibility applies to common subscription situations:

New customer cancels within the 14-day window. Eligible for a full refund of the initial payment. Product access is deprovisioned per Section 5, with the standard 30-day data retention window still applying.

Existing customer's subscription renews automatically, and they did not intend to continue. Not eligible for the standard first-time refund, since a renewal is not a first-time purchase. The customer can cancel to prevent further renewals; refund of the just-processed renewal charge is reviewed at NovaTech's discretion, and is more likely to be granted if requested within a few days of the renewal charge and before significant usage in the new term.

Customer upgrades from Professional to Enterprise, then wants to revert within days. The prorated upgrade charge is generally eligible for a refund if requested promptly, with the account reverted to Professional edition; this is handled as a downgrade with an accompanying billing adjustment rather than a standard refund request.

Enterprise customer's multi-year contract includes a negotiated early-termination clause. Refund treatment (if any) follows the specific terms of that clause rather than this general policy; see Section 9.

Customer was charged for seats added by a former employee who is no longer with the organization. Not automatically refundable, since the seats were validly added at the time of purchase; the customer should adjust seat count going forward. Billing Support may review under exceptional circumstances at its discretion.

9. Enterprise Agreement Refunds

Enterprise customers operating under a negotiated Master Services Agreement (MSA) and Order Form are subject to the refund, credit, and termination terms specifically defined in that agreement, which take precedence over the general policy described in this document where the two conflict. Common Enterprise-specific provisions include:

- Defined early-termination fees or pro-rated refund calculations for multi-year contracts terminated before term end.
- Refund or credit terms tied to negotiated custom SLA commitments that differ from the standard tiers in the Warranty and Service Policy.
- Milestone-based refund eligibility for Enterprise onboarding and professional services engagements, where partial refunds may apply if NovaTech fails to deliver a contracted implementation milestone.

Enterprise customers should refer to their specific Order Form and MSA, or contact their Customer Success Manager, for definitive refund terms applicable to their agreement.

10. Disputed Charges and Chargebacks

Customers who believe they have been charged in error are strongly encouraged to contact Billing Support directly before initiating a chargeback with their card issuer or bank. Direct resolution through Billing Support is typically faster than the chargeback process and avoids the account restrictions described below.

Warning: Filing a chargeback without first contacting NovaTech Billing Support may result in immediate suspension of the associated account pending resolution of the dispute, since an open chargeback places a hold on NovaTech's ability to process further transactions on that payment method. Once a chargeback is resolved in the customer's favor, any suspended access is restored; if resolved in NovaTech's favor, standard payment failure procedures apply per the Pricing and Subscription Guide, Section 11.3.

11. Frequently Encountered Scenarios

A customer requests a refund on day 13 of the 14-day window after extensively using the product. The refund is approved under the standard first-time purchase policy; usage level does not disqualify eligibility within the window, as described in Section 3.

A customer requests a refund for an annual subscription six months into the term, citing that they simply stopped needing the product. This falls outside the 14-day window and is not eligible for a prorated refund under standard policy; the customer may cancel auto-renewal to prevent future charges, with current-term access continuing through the paid period.

An organization is billed for 50 seats but only 40 employees ever logged in. This does not constitute a billing error, since seats were purchased and made available as requested; no refund applies for unused-but-available seats, though the customer can reduce seat count for the next billing cycle.

A customer's card is charged twice for the same invoice due to a processing retry overlapping with a manual retry initiated by the customer. This is treated as a duplicate charge and is fully refunded once confirmed by Billing Support.

12. Summary

As a fully cloud-delivered SaaS provider, NovaTech Solutions' refund policy centers on a 14-day first-time purchase window, full refunds for confirmed billing errors or duplicate charges, and service credits (rather than cash refunds) for documented SLA shortfalls. Because there is no physical product, "returns" take the form of deprovisioning access

following an approved refund, with data retained read-only for 30 days. Enterprise customers are governed first by their specific Master Services Agreement terms where applicable. This policy should be read alongside the Pricing and Subscription Guide (Document 2) for underlying billing mechanics and the Warranty and Service Policy (Document 6) for SLA-related service credit terms.
