

NovaTech Solutions — Customer Support Reference Guide

Version: 4.2 **Last Updated:** July 15, 2026 **Document Owner:** NovaTech Solutions Customer Support Team **Audience:** All customers; used as a self-service knowledge base and support agent reference

Table of Contents

1. Login and Access
 2. Passwords and Authentication
 3. Accounts and Organization Management
 4. Orders and Purchasing
 5. Billing and Payments
 6. Subscription Management
 7. Features and Functionality
 8. Integrations
 9. Security
 10. Performance and Reliability
 11. Updates and Releases
 12. Licensing
 13. General Support
 14. Summary
-

1. Login and Access

All NovaTech products are accessed through a single web address, app.novatechsolutions.com, with Enterprise customers able to configure a custom organization domain (for example, yourcompany.novatechsolutions.com). Login credentials are tied to a user's registered email address, and access to any given product depends entirely on whether the organization has licensed that product and assigned the user a seat.

Session behavior varies by edition. Starter and Professional accounts default to a 12-hour inactivity timeout. Enterprise administrators can configure this value down to as little as 15 minutes for compliance-sensitive environments through Security Settings. "Remember Me" functionality extends session persistence on trusted devices but is not recommended on shared or public computers; administrators can disable this option organization-wide.

Common access issues and their typical resolutions include:

Symptom	Likely Cause	Resolution
"Account Not Found" error	Incorrect email or outdated address after an admin change	Confirm correct email and organization URL; contact administrator to verify the user record is active
Able to access one product but not another	Product not licensed, or seat not assigned	Contact your account administrator to confirm licensing and seat assignment
Mobile app login fails despite correct password	App version too outdated to authenticate	Update to the latest app version; versions more than two major releases behind are no longer supported
Repeated forced logouts	Session timeout policy, possibly tightened by an administrator	Review Security Settings with your administrator, or re-enable "Remember Me" if permitted

Users can also authenticate using "Sign in with Google" or "Sign in with Microsoft," available to individual accounts on every edition. Full SAML-based single sign-on (SSO) is available on Professional and Enterprise editions, and concurrent session limits can be configured by Enterprise administrators.

Tip: Private or incognito browser windows can be used to access NovaTech products, but "Remember Me" and certain offline caching features will not persist between sessions.

2. Passwords and Authentication

Passwords must be at least 10 characters and include an uppercase letter, a lowercase letter, a number, and a special character. By default, passwords do not expire, though Enterprise administrators may enforce a rotation policy — commonly every 90 or 180 days — through Security Settings.

To reset a forgotten password, users select "Forgot Password" from the login screen and follow the emailed reset link, which remains valid for 60 minutes. Repeated failed login attempts (five consecutive failures) trigger a temporary 15-minute account lock as a brute-force protection measure.

Multi-factor authentication (MFA) is supported across the platform:

- Authenticator app (TOTP) — available on all editions
- SMS-based MFA — Professional and Enterprise only
- Hardware security key (FIDO2/WebAuthn) — Professional and Enterprise only

- Organization-wide mandatory MFA enforcement — Professional and Enterprise only

Users who lose access to their MFA device should contact their organization administrator, who can reset MFA enrollment from the Admin Console. Individual account holders without an administrator should contact NovaTech Support and complete identity verification.

Passwords are never stored in plain text; NovaTech uses salted bcrypt hashing for all stored credentials, as described further in the Privacy and Security Policy (Document 10).

NovaTech will never request a password by email, chat, or phone — any such request should be treated as phishing and reported to security@novatechsolutions.com.

3. Accounts and Organization Management

New accounts are created at novatechsolutions.com/signup or automatically when a customer starts a free trial. Each email address may be associated with only one NovaTech account; customers needing separate personal and organizational access should use distinct email addresses.

Organization administrators manage the account through Admin Console > Users, where they can:

- Invite new users by email and assign product/seat access
- Reassign licenses between employees at any time, with no limit on frequency
- Transfer primary account ownership, which requires confirmation from both the outgoing and incoming owner
- Rename the organization without affecting an existing custom domain

There is no limit on the number of administrators an organization may designate, and NovaTech recommends maintaining at least two for business continuity.

When a user is removed from an organization, records they created — deals, tickets, tasks, and messages — remain in the account and are reassigned to a fallback owner selected by the administrator during the removal process; no data is lost.

Full account closure is initiated from Admin Console > Organization Settings > Close Account, or by contacting Billing Support; the process is described in detail in the Account Management Guide (Document 9). Merging two existing organization accounts is not self-service, due to the complexity of resolving duplicate records and overlapping licenses, and must be coordinated directly with NovaTech Support. Enterprise customers with multiple business units may request a Multi-Org Hierarchy, allowing consolidated billing across separate operational sub-accounts.

4. Orders and Purchasing

Starter and Professional editions can be purchased self-service through the in-app "Upgrade" button. Enterprise purchases are handled through an Account Executive, given the negotiated nature of Enterprise pricing. Quotes can be requested for any product and edition — including Starter and Professional — and remain valid for 30 days from issue.

Purchase Question	Standard Answer
Who can complete a purchase?	Any authorized user; administrative and seat-assignment control remains with the account owner or administrator
Are purchase orders available for small accounts?	No; Net 30 purchase order billing is reserved for Enterprise accounts meeting the minimum contract value defined in the Pricing and Subscription Guide
Can I get a formal invoice?	Yes, generated automatically and available under Admin Console > Billing > Invoice History
Can I cancel a mistaken purchase?	First-time purchases are eligible for a full refund within 14 days; contact Billing Support
Can I change the billing contact after purchase?	Yes, from Admin Console > Billing > Billing Contact, or via Billing Support for Enterprise MSAs

Discounted bulk seat pricing outside of Enterprise negotiation is not available; organizations seeking volume-based pricing should engage an Account Executive for an Enterprise quote. Additional storage and API capacity can be purchased independently of seat purchases as standalone add-ons.

5. Billing and Payments

Accepted payment methods vary by region and account tier, ranging from credit card (accepted everywhere) to ACH, SEPA, wire transfer, and purchase order for qualifying accounts. Full detail is provided in the Pricing and Subscription Guide, Section 8.

Declined payments are most often caused by insufficient funds, an expired card, or the issuing bank flagging the transaction as unusual. Customers can update payment details under Admin Console > Billing > Payment Methods and retry the charge. After three failed automated retry attempts, the account enters a 14-day Grace Period, during which access remains fully available while the administrator receives daily reminder notifications; unresolved payment failures beyond the Grace Period result in a downgrade to read-only access.

Billing timing follows a predictable pattern:

- Monthly subscriptions are charged on the same calendar date each month as the original purchase.
- Annual subscriptions are charged once per year, on the purchase anniversary, unless auto-renewal has been disabled.
- Invoice amounts that differ from expectations are typically explained by prorated mid-cycle seat additions, applicable taxes, or a recent edition upgrade — all itemized in the invoice breakdown.

Split payments across two credit cards are not supported. Duplicate charges are eligible for a full refund and should be reported to Billing Support with the relevant invoice numbers. Applicable sales tax, VAT, or GST is calculated automatically from the billing address on file; VAT-registered EU customers may apply reverse-charge treatment by entering a valid VAT number at checkout. Full invoice history is retained for the lifetime of the account under Admin Console > Billing > Invoice History.

6. Subscription Management

Current edition and seat counts for each product are visible under Admin Console > Billing > Subscription Overview. Upgrades on Starter and Professional editions are self-service and take effect immediately with prorated billing; Enterprise upgrades require coordination with an Account Executive. Downgrades are also self-service but take effect at the start of the next billing cycle, preserving access to already-paid functionality through the current term.

NovaTech does not offer a "pause" feature for subscriptions. Customers looking to temporarily reduce cost can instead reduce seat count or downgrade edition, then upgrade again later without data loss.

Cancellation and reactivation follow a consistent pattern across products:

- Subscriptions are canceled from Admin Console > Billing Settings > Cancel Subscription, or by contacting Billing Support.
- Canceled accounts retain full data in a read-only, exportable state for 30 days.
- Reactivation within that 30-day window restores full access and data with no loss; reactivation after 30 days requires setting up a new account.
- Auto-renewal can be disabled independently of cancellation, allowing continued use through the current paid term without automatic renewal.

Only users holding the Administrator or Billing Manager role can modify subscription settings, including switching between monthly and annual billing, which takes effect at the next renewal date.

7. Features and Functionality

Feature availability is governed primarily by product edition, as summarized in the Product Catalog (Document 1). Common capability questions and their answers include:

Product	Capability	Availability
CRM	Contact record limits	2,500 (Starter) / 50,000 (Professional) / Unlimited (Enterprise)
CRM	Custom fields	10 / 50 / Unlimited
CRM	Workflow automations	5 active / 100 active / Unlimited
Projects	Gantt/Timeline view	Not included (Starter) / Included (Professional, Enterprise)
Projects	Time tracking	Not included (Starter) / Included (Professional, Enterprise)
Projects	Attachment size limit	25 MB (Starter, Professional) / 250 MB (Enterprise)
Connect	External video meeting participants	Supported on all editions via shared link, no NovaTech account required
Connect	File size limit	2 GB, all editions
Insights	Custom dashboards	2 / 25 / Unlimited
Insights	Predictive forecasting	Not included (Starter) / Sales forecasting only (Professional) / Full model suite (Enterprise)
Insights	Natural Language Query	Professional and Enterprise only, select languages
Helpdesk	SLA policies	1 default (Starter) / Up to 10 custom (Professional) / Unlimited (Enterprise)
Helpdesk	Knowledge base articles	50 (Starter) / Unlimited (Professional, Enterprise)

Custom fields, workflow automation, dashboard building, and SLA configuration are all managed within each product's respective admin settings area, with configuration steps detailed in the Product User Manual (Document 5).

8. Integrations

NovaTech products connect natively to widely used business tools, with integration depth generally tied to edition tier. Email integration with Gmail and Microsoft Outlook is available in NovaTech CRM on Professional and Enterprise editions, enabling two-way sync. Project tracking tools such as GitHub and GitLab connect natively to NovaTech Projects, allowing linked commits and pull requests to automatically update task status.

A public REST API is available on Professional (read-only) and Enterprise (full read/write) editions for CRM, Projects, and Helpdesk, rate-limited at 1,000 requests per hour on Professional and 10,000 requests per hour on Enterprise. Additional rate limit capacity can be purchased as an add-on described in the Pricing and Subscription Guide.

Accounting integrations follow a tiered structure: QuickBooks Online and Xero are available on Professional and Enterprise, while NetSuite is restricted to Enterprise. Slack integration functions as a notification bridge for tools like Helpdesk, alerting designated channels to new or updated tickets, rather than serving as a full messaging replacement.

Native integrations listed in the Product Catalog are included at no additional cost on eligible editions. Some third-party applications available through the NovaTech App Marketplace — including certified Zapier connectivity — carry separate subscription fees charged directly by the third-party developer. Customers requiring integrations not available natively or in the Marketplace can build custom connections using the public API and webhook infrastructure on Professional and Enterprise editions.

9. Security

Data is encrypted in transit using TLS 1.2 or higher and at rest using AES-256 encryption. NovaTech Solutions maintains SOC 2 Type II certification, renewed annually, along with ISO/IEC 27001 certification, and undergoes third-party penetration testing at least annually, with results available to Enterprise customers under NDA upon request.

Data residency options scale with edition: Starter is US-only, Professional supports US and EU, and Enterprise supports US, EU, and APAC, with custom arrangements available on request. Enterprise editions additionally support IP allowlisting, restricting login access to specified network ranges, and audit log retention that ranges from 30 days on Starter to unlimited on Enterprise.

Security-related governance features include:

- Organization-wide SSO enforcement (SAML 2.0 on Professional; SAML 2.0 with SCIM provisioning on Enterprise)
- Full GDPR compliance program, including data processing agreements (DPAs) available on request

- Formal Incident Response process with customer notification within 72 hours of confirmed impact
- A responsible disclosure program and bug bounty for security researchers, reachable at security@novatechsolutions.com

Full detail on data handling, encryption standards, and breach notification procedures is provided in the Privacy and Security Policy (Document 10).

10. Performance and Reliability

Uptime commitments scale with edition, at 99.5% for Starter, 99.9% for Professional, and 99.95% for Enterprise, with service credit eligibility for Professional and Enterprise customers described in the Warranty and Service Policy (Document 6). Current system status and historical uptime are published at status.novatechsolutions.com.

Slow application performance is most commonly linked to browser cache buildup, local network conditions, or unusually large dashboards and reports; diagnostic steps are covered in the Troubleshooting Guide (Document 4). Scheduled maintenance that may affect availability is announced at least 72 hours in advance through the status page and in-app notifications. Customers experiencing a suspected full outage should check the status page first to confirm whether it reflects a known incident before contacting Support directly.

11. Updates and Releases

Minor updates and bug fixes are released on a rolling basis, typically weekly, while major feature releases occur quarterly. Updates that materially change existing workflows are communicated at least 14 days in advance by email and in-app banner. Some newer features can be disabled at the organization level under Admin Console > Feature Settings, though core platform updates related to security and infrastructure cannot be opted out of.

Customers interested in early access to upcoming functionality can opt into the NovaTech Early Access Program at no additional cost, also managed under Feature Settings. Release notes are published at novatechsolutions.com/releases and mirrored in-app under Help > What's New. Mobile application updates depend on each device's app store auto-update configuration; NovaTech recommends enabling automatic updates to maintain compatibility with the latest platform features.

12. Licensing

Licenses are assigned per named user by an administrator through Admin Console > Users, and can be reassigned between employees at any time with no limit on frequency. A named user is defined as any individual — or service account used for integration purposes — with a unique login credential. Sharing a single login across multiple individuals to reduce

licensing costs violates the NovaTech Terms of Service and may result in account suspension pending license reconciliation.

Mobile and desktop application access is included at no additional cost with any purchased license, across all supported platforms. Viewer seats, available on Projects and Insights, provide read-only access at a reduced rate compared to full Contributor seats. Service accounts used for API integrations are considered named users and require a paid license, typically assigned at the Professional or Enterprise tier to enable API access.

13. General Support

Support is available through the in-app Help widget, by emailing support@novatechsolutions.com, or by phone for Enterprise customers with a dedicated support line. Standard support hours are Monday through Friday, 6:00 AM to 8:00 PM Central Time; Enterprise customers with the Premium Support add-on receive 24/7 coverage.

Support Channel	Availability
Email and chat	All editions
Phone support	Professional and Enterprise only
Dedicated Customer Success Manager	Included with Enterprise; available as a paid add-on for Professional accounts with 50+ seats
24/7 coverage	Enterprise with Premium Support add-on

Response time targets vary by ticket severity and edition, as detailed in the Warranty and Service Policy (Document 6). Tickets that remain unresolved can be escalated by replying to request escalation or by contacting an assigned Customer Success Manager; formal escalation criteria are outlined in the Troubleshooting Guide (Document 4).

New users can access free self-service training through NovaTech Academy, while live onboarding sessions are available for purchase as a Premium Onboarding Package. Product feedback and feature requests can be submitted through the in-app Feedback widget or the public board at feedback.novatechsolutions.com.

14. Summary

This reference guide consolidates common customer support topics — login and authentication, account and organization management, purchasing, billing, subscription changes, product features, integrations, security, performance, release management, licensing, and general support — into a single narrative resource for both customers and

support staff. For deeper detail on any topic, refer to the corresponding dedicated document: the Product Catalog (Document 1), Pricing and Subscription Guide (Document 2), Troubleshooting Guide (Document 4), Product User Manual (Document 5), Account Management Guide (Document 9), or Privacy and Security Policy (Document 10).
